

Veer Verma

Gen AI Developer · Building Across Web & Mobile

+91 7983773466 · veerverma828@gmail.com · LinkedIn · GitHub · Portfolio

OBJECTIVE

Computer Science graduate who builds Gen AI applications end-to-end, from multiple AI agents working together to connecting them with real apps on web and mobile. Comfortable working across the whole process, from picking and using the right AI models to putting the final product together, with an eye for getting the details right.

TECHNICAL SKILLS

Generative AI / LLMs	LLM APIs, Prompt Engineering, Structured Outputs, Function/Tool Calling, RAG, Embeddings, Hybrid Search, Grounding & Citations
AI Agents	ReAct Agents, Tool-Using Agents, LangGraph, Agent Memory, MCP, Human-in-the-Loop
LLM Evaluation	Golden Datasets, LLM-as-a-Judge, Error Analysis, RAGAS, Regression Testing, Context Precision/Recall, Faithfulness, Answer Relevancy
LLM Engineering	Tokenization, Context Windows, Streaming, Async APIs, Cost Optimization, Prompt Caching, Rate-Limit Handling, Model Routing, Latency Optimization
AI Application Development	Python, FastAPI, REST APIs, SSE, Observability (Langfuse), Environment/Secret Management, MERN Stack
AI Security	Prompt Injection, Indirect Prompt Injection, PII Redaction, Guardrails, Sensitive Information Protection, DPDP Basics

TECHNICAL PROJECTS

Qwerywise — Local Retrieval-Augmented Generation (RAG) System	RAG, LangChain, ChromaDB, Ollama
- Built a local RAG pipeline with LangChain, Chroma, and Ollama that answers questions grounded in custom documents, using local embedding and generation models with no external API calls. - Implemented document ingestion and chunking, persistent vector storage, and a retrieval chain (top-k similarity search into a context-injected LLM prompt) with an on-demand re-indexing workflow.	
Aggrify — Real-Time Grocery Price Comparison Engine	React, Express, Playwright, Gemini
- Aggregates live grocery prices across 5 quick-commerce platforms (Blinkit, Zepto, Instamart, JioMart, and Flipkart) using concurrent Playwright scrapers coordinated through a multi-agent blackboard architecture, streaming results to the React UI via Server-Sent Events. - Includes a Gemini-powered shopping assistant for basket optimization, fake-discount detection (flags markdowns over 70% as suspicious), and trust scoring (alerts below an 80% reliability threshold).	
Media discovery & streaming platform	React.js · Node.js · Express.js
^ torrent-gamma.vercel.app Full-stack MERN platform for movie and series discovery. - Chains 4 external APIs — Cinemeta (metadata/posters), Torrentio (streaming sources), Jackett (torrent search with seeders/size), and Real-Debrid (download/unrestriction) — behind an Express backend. - Features season-to-episode navigation, IMDb direct search, and debounced auto-search in a state-driven React UI.	
NovaShare — Peer-to-Peer File Sharing Application	React, Capacitor, WebRTC, PeerJS
^ veerverma828.github.io/novashare Built a cross-platform P2P sharing app using React, Capacitor, WebRTC, and PeerJS. Ships 9 features: QR-based device pairing, multi-file/folder transfers, pause/resume, nearby discovery, Wi-Fi Direct, hotspot fallback, clipboard sharing, chat, and transfer history.	

EDUCATION & CERTIFICATIONS

B.Tech in CSE(Data Science), CGPA: 7.72	2021 – 2025
Google x Kaggle — 5-Day AI Agents Intensive	
Hands-on Vibe Coding certification: built AI agents that take actions, call tools, and handle multi-step tasks, with memory of past interactions, safety guardrails, and automated testing. Launched and monitored production AI apps using Google AI Studio (Gemini API).	
Languages: English (Professional), Hindi (Native)
